Dear Researchers:

The primary aim of the "Korkut Ata Journal of Engineering and Natural Sciences" is to contribute to national and international academic literature by publishing original, high-quality, and ethically sound scientific studies prepared in English within the fields of engineering and natural sciences.

The journal aims to establish a prominent publication platform that supports the scientific interaction between engineering applications and natural sciences, facilitating the sharing of experimental, numerical, theoretical, and applied research results with the global academic community. In this regard, scientific originality, methodological competence, an interdisciplinary approach, and a significant contribution to literature constitute the core publication philosophy of the journal.

The scope of the journal encompasses various branches of engineering sciences and the fields of natural sciences related to engineering applications. In this context, studies originating from engineering fields, primarily computer engineering, electrical-electronics engineering, industrial engineering, energy systems engineering, food engineering, geomatics engineering, civil engineering, and mechanical engineering, are evaluated within the scope of the journal.

Furthermore, the journal is open to studies conducted in the fields of biology, physics, chemistry, mathematics, and applied natural sciences, particularly those that can be associated with engineering problems, technological applications, or interdisciplinary scientific approaches. You can access our journal via the link below and find detailed information regarding writing guidelines, publication policies, and article submission processes:
